

# Android Bluetooth Chat Application

Simple Bluetooth App to chat and transfer files via bluetooth.

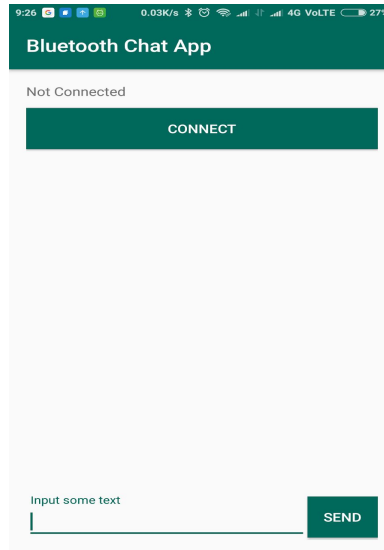

IDE used is Android Studio

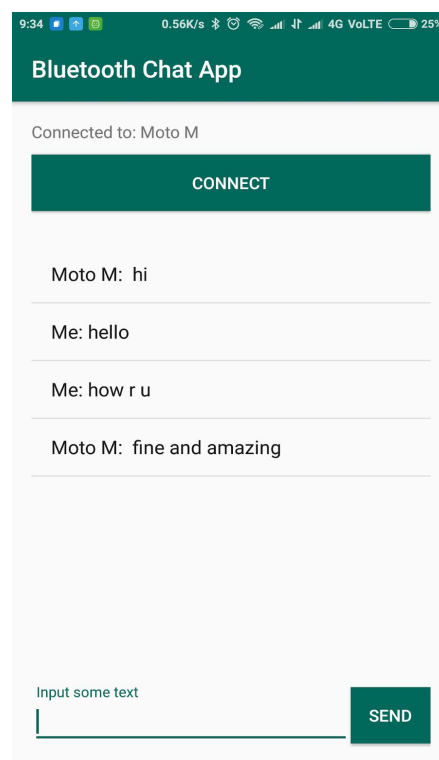

This is the opening screen of the application. Later, we enter into an activity where we need to choose if we want to chat or send a file.

After choosing the respective button, we get into different screens.

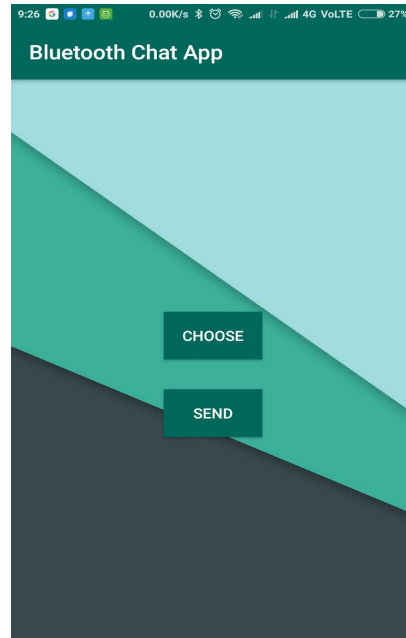

We get this screen if we choose chat option.

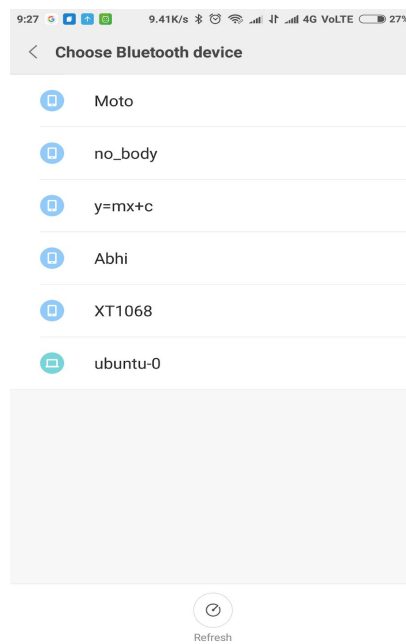

A chatting example.

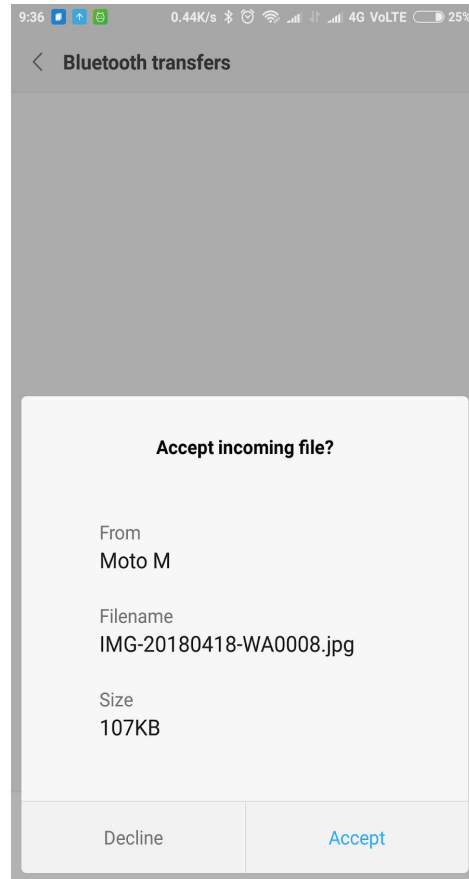

Now for file transfer, screen looks like this.

We have to choose the file first, then we need to send the image.

After clicking on send list of available bluetooth devices are opened and after choosing the device we can send the image.

At receiver's side , permission is needed to accept the file.
